## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

1. Claims 1-27 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1;

on line 8, it is not clear whether the raw data is collected, reduced AND output as IMAGE DATA.

on line 9, it is not clear what is responsive to the roll, tilt and pitch sensor.

on line 11, it is not clear what prior structure provides for the "orientation of the sonar system".

In claim 4, there is no antecedent for "said transmitter".

In claim 10, there is no antecedent for "the transmit signal".

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by the patent to Shell ('215).

The Shell patent discloses a three-dimensional imaging system for a sonar. The system includes a transmit transducer (col. 4, lines 33-34), an array of sonar sensors (high-resolution array (HRA)), an inertial navigation system that reads upon the claimed "at least one of a roll, tilt and yaw sensor", a gps sensor (col. 4, lines 2+) that is capable of determining the longitude and latitude position of the sonar and circuitry (50) that is capable of collecting the data from the multiple sensors and generating a complete image including the geographical location of coordinates within the image data based upon coordinates of the sonar system and orientation of the sonar system. The structure claimed in claim 1 is met by the system disclosed by Shell.

Dependent claims 2 and 3 are further provided by the Shell patent.

### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 4-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shell taken in view of Kosalos et al ('931).

Dependent claims 4-27 are specific to various aspects of the imaging system, some broad and some narrow. Although Shell does not disclose the specifics of all the imaging system claimed, the specific structure of claims 4-27 may be found in the prior art patent to Kosalos et al. The claimed structure of claims 4-27, although not specified

in Shell, would however have been obvious expedients to the skilled artisan in this field when taken in view of the patent to Kosalos et al.

### ***Response to Arguments***

6. Applicant's arguments with respect to claim 1 have been considered but are moot in view of the new ground(s) of rejection.
